Subject to the SEBI Regulations, the asset allocation pattern of the Scheme indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors.

It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary depending upon the perception of the Investment Manager; the intention being at all times to seek to protect the interests of the Unit holders. However, if market conditions do not permit the Fund Manager to rebalance the portfolio of the Scheme within the stipulated period of thirty (30) business days, justification in writing including details of efforts taken to rebalance the portfolio for the same shall be provided to the Investment Committee. The Investment Committee shall then decide on the course of action and if they so desire can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period. The AMC shall comply with the requirements prescribed under clause 2.9 of the SEBI Master Circular for Mutual Funds dated June 27, 2024 as may be amended from time to time.

The Investment Committee may extend the timeline by 30 business days, while also making recommendations on how to ensure deployment within 30 business days going forward and monitoring the same. The Investment Committee shall examine the root cause for delay in deployment before granting approval for part or full extension. Further, in case the funds are not deployed as per the asset allocation

C. WHAT ARE THE INVESTMENT STRATEGIES? <C.S.O.27>

S.O.7

The Scheme will be managed actively in line with the investment objective and asset allocation pattern of the Scheme. The objective of the Scheme is to generate long-term capital appreciation from a portfolio

that is invested predominantly in equity and equity related securities of entities engaged in banking & financial services sector. Being a sectoral fund, the Scheme will invest minimum 80% of its net assets in equity and equity related instruments of entities engaged in Banking & Financial Services Sector in accordance with the sector list provided by AMFI.

Banking and Financial Services Sector may include but shall not be limited to:

- Banks
- Non-Banking Finance Companies
- Housing Finance Companies
- Micro Finance Companies
- Stock Broking & Allied Entities,
- Asset Management Company(s),
- Depositories
- Credit Rating Agencies
- Clearing Houses, Registrar & Transfer Agents and Other Intermediaries
- Financial Technology (Fintech), Exchanges and Data Platforms
- Investment Banking Companies
- Wealth Management Entities
- Distributors of Financial Products
- Insurance Companies – General, Life, Health & Reinsurance

This above list is only indicative, and the Scheme will explore to invest in new and emerging areas of Banking & Financial Services Sector.

The selection of entities that fall within the underlying sector of Banking and Financial Services would be driven primarily by the growth prospects and valuations of the businesses over a medium to long term as per the discretion of the fund manager. The investment emphasis of the Scheme will be in identifying entities with strong competitive position in good business and having quality management. The AMC would follow an active investment style supported by in-house research. Essentially, the focus would be on fundamentally strong entities with scope for growth over time. The AMC, in selecting the entities, would focus on the fundamentals of the business, the industry structure, the quality of management sensitivity to economic factors, the financial strength of the entity and the key earning drivers. The scheme may from time to time hold cash / cash equivalents for the purpose of derivative investments and for meeting liquidity requirements.

Equity and Equity-related Instruments:

As the Scheme intends to invest predominantly in equity/equity related instruments of entities engaged in banking and financial services sector, hence the concentration is likely to be high in entities belonging to the said sector. Further, the volatility and/or adverse performance of the said sector and/or of the entities belonging to this sector would have a material adverse bearing on the performance of the Scheme. The Fund Manager has the discretion to invest in units of REITs, in line with the asset allocation pattern of the Scheme and by adhering to various norms and regulations.

Debt and Money Market Instruments:

The Scheme may invest upto 20% of the Net Assets of the Scheme in Debt and Money Market Instruments. The Scheme will invest in a diversified range of debt and money market instruments. The scheme's assets will be allocated by the fund manager based on the current interest rate environment, yield curve, yield spread, and liquidity of the various instruments. The Investment Manager will actively analyse the current

general economic environment (especially interest rates and inflation), general liquidity, political environment as well as other aspects of the economy and markets prior to making the investments.

Derivatives:

S.O.5

The scheme may invest in derivatives such as futures & options and such other derivative instruments like stocks/ index futures and options, interest rate swaps, forward rate agreements, or such other derivative instruments as may be introduced and permitted by the SEBI from time to time. The scheme may invest in derivatives for the purpose of hedging, portfolio balancing, other than hedging purposes (equity derivatives) and other purposes as may be permitted under the regulations. Hedging using interest rate futures could be perfect or imperfect, subject to applicable regulations. The margin for derivatives may be placed in the form of such securities/ instruments/ deposits as may be permitted/eligible to be placed as margin from the assets of the scheme. The securities/ instruments/ deposits so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.

For detailed derivative strategies, please refer SAI.

InvITs:

The Fund Manager has the discretion to invest in units of InvITs as specified, in line with the asset allocation pattern of the Scheme and within stipulated limits and by adhering to various norms and regulations.

Investment in Mutual Fund units:

The Scheme may also invest in schemes managed by the AMC or in the Schemes of any other mutual funds (without charging any fees) in conformity with the investment objective of the Scheme and in the terms of the prevailing SEBI (Mutual Funds) Regulations, 1996. Provided the aggregate inter-scheme investment made by all the schemes under the same management or in schemes under management of any other asset management company shall not exceed 5% of the Net Asset Value of the Mutual Fund.

Stock/Securities Lending by the Fund:

The Fund may carry out stock/securities lending activity under any of its Schemes, in order to augment its income. Stock/securities lending may involve the risk of default such as loss, bankruptcy etc. on the part of the borrower. However, this is unlikely to happen if the stock/securities lending is carried out for stocks/securities which are in dematerialized form and through an authorized stock/securities lending Scheme which is subject to appropriate regulation. Any stock/securities lending done by the Scheme shall be in accordance with any regulations or guidelines regarding the same. The policy to be followed for stock/securities lending shall be approved by the Board of Directors of the Investment Manager as well as by the Board of Trustee Company.

The Scheme shall invest in such other securities as permitted by the Regulations and as stated in the asset allocation pattern.

Securitised Debt:

As a risk control measure, the Scheme shall make investment in such Securitised Debts which have a minimum rating of P1+ and/or such other equivalent rating for short term papers or AAA and/or such other equivalent rating for long term papers which suits the risk profile of the Scheme. The ratings AAA or its equivalent, P1+ or its equivalent assigned to instruments reflects highest degree of safety with regard to timely payment of financial obligations and the + sign reflects comparatively better standing within the category. Investments in these instruments with the highest ratings suit the risk profile of the Scheme. The Scheme shall not invest in any Pool of Assets.

Policy relating to Originator(s) – The Scheme shall invest in those Securitised Debt, whose Originator is a Corporate Entity, being a Bank or an NBFC. The Scheme shall invest in the instruments subject to necessary investment limits mentioned under SEBI regulations. Risk may be mitigated by seeking additional credit support (credit enhancement) in order that the instrument(s) may receive the desired level of credit rating. Further, prior to investing in Securitised Debt, it would be ensured that the minimum retention period of the debt and minimum retention percentage by the Originator prior to securitization shall be as prescribed by the RBI guidelines. Any investment in Securitised Debt has to go through an independent credit appraisal process and no special consideration shall be given to whether the Originator has invested in any Scheme(s) of Canara Robeco Mutual Fund.

Level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments - The Scheme shall not be investing in any pool of assets. Investment in securitized asset shall only be single loan securitized debt instruments backed by originator as referred above.

Resources and mechanism of individual risk assessment for monitoring investment in securitized debt – Dedicated credit analyst prepares a credit note analyzing the proposal including detailed risk assessment of the underlying. The credit note is recommended by the Head of Fixed income and is approved by the Investment committee. The dedicated credit analyst shall be responsible for timely analyzing the risk and monitoring the performance of such investments made on an ongoing basis and shall report to the Investment Committee the outstanding position, every quarter.

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

Procedure followed for investment decisions:

The Fund Manager of the Scheme is responsible for making buy / sell decisions for the Scheme's portfolio and seeks to develop a well-diversified portfolio taking into account the asset allocation pattern of the Scheme along with risks that are associated with such investments. The investment decisions are made on an ongoing basis keeping in view the market conditions and other regulatory aspects.

The AMC has constituted an Investment Committee, currently comprising of the CEO, COO, Chief Risk Officer, Chief Investment Officer - Equities and Chief Investment Officer - Fixed Income that meets at periodic intervals. The Investment Committee's role is to formulate broad investment strategies for the Scheme, review the performance of the Scheme and the general market outlook.

The Fund Manager is responsible for facilitating investment debate and a robust investment culture. The investment team would hold ongoing meetings as well as additional ad-hoc meetings as needed, to explore the investment thesis.

It is the responsibility of the AMC to seek to ensure that the investments are made as per the Regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme.

The AMC will keep a record of all investment decisions in accordance with the guidelines issued by SEBI.

The AMC and Trustees will review the performance of the scheme in their Board meetings. The performance would be compared with the performance of the benchmark index and with peer group in the industry.

Portfolio Turnover Policy:

Purchase and Sale of securities attract transaction costs of the nature of brokerage, stamp duty, custodian transaction charges etc. The portfolio turnover is essential to regularly explore trading opportunities to optimize returns for the Scheme and enable portfolio restructuring when required.

The Scheme will manage its portfolio taking into account the associated risks (such as interest / liquidity / redemption etc.) perceived / expected, so as to mitigate the risks by using adequate risk management techniques. The portfolio turnover policy will be aimed at enhancing the returns/growth.

The Scheme is open ended, with subscriptions and redemptions expected on a daily basis, resulting in net inflow/outflow of funds, and on account of the various factors that affect portfolio turnover; it is difficult to give an estimate, with any reasonable amount of accuracy. Therefore, the Scheme has no specific target relating to portfolio turnover.

With effect from 01st April 2023, IND AS guidelines have been implemented and all transactions cost of investment are to be expensed out (i.e., charged to revenue account instead of capitalisation) as per the amended Regulations 52 (6A)(a) of SEBI (Mutual Funds) Regulations 1996.

Risk Control:

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in portfolio construction process. Security specific risk will be minimized by investing only in those entities that have been thoroughly analyzed by the AMC.

Through adequate diversification of the portfolio, the AMC tries to reduce the risk. Diversification will also be achieved by spreading the investments over a diverse range of industries. The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified.

As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the Scheme and provisions of SEBI Regulations. The Risks and the corresponding risk mitigation strategies are provided under Section II.

S.O.9

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE? <C.S.O.25>

The performance of the Scheme will be benchmarked with the following:

Tier I Benchmark:

Nifty Financial Services Index (TRI)

The Scheme will be benchmarked against Total Return variant of the Index.

Justification for use of Benchmark:

Nifty Financial Services Index is designed to reflect the behaviour and performance of the Indian financial market which includes banks, financial institutions, housing finance, insurance companies and other financial services companies. The Scheme is being benchmarked against the Index mentioned above, since the Index is most suited for comparing performance of the Scheme. Further, the above benchmark is in accordance with paragraph 1.9 of SEBI Master Circular for Mutual Funds dated June 27, 2024 on 'Guiding Principles for bringing uniformity in Benchmarks of Mutual Fund Schemes'.

The Trustee reserves the right to change the benchmark for evaluation of performance of the Scheme in conformity with the investment objective of Scheme and/or as prescribed by SEBI/AMFI from time to time, in accordance with applicable regulatory guidelines.

PART III- OTHER DETAILS

A. COMPUTATION OF NAV < C.S.O. 42>

The Mutual Fund shall compute the Net Asset Value (NAV) of each scheme in accordance with SEBI (Mutual Funds) Regulations, 1996. The AMC will calculate and disclose the first NAV of the Scheme within a period of 5 business days from the date of allotment. Subsequently, the NAV of the Scheme shall be calculated on all business days.

The computation of NAV, valuation of securities / assets, accounting policies and standards would be in conformity with the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued from time to time.

The NAV per unit under the Scheme shall be calculated as follows:

Market or Fair Value of Scheme's investments + Current assets (including accrued income) – Current Liabilities and Provisions (including accrued expenses)	
	= NAV (Rs.)
No. of Units outstanding under the Scheme	

The price arrived shall be rounded off up to two decimals. The AMC reserves the right to calculate NAV more than two decimal places. Units will be allotted upto 3 decimals.

An Illustration:

Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current assets of the Scheme is Rs.25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the Scheme are 5,00,000.

Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{1,00,00,000 + 25,00,000 - 15,00,000}{5,00,000}$$

Therefore, the NAV of the Scheme is Rs. 22.00.

S.O.
17(b)

The repurchase price of an open ended scheme shall not be lower than 97% of the NAV.

Methodology of calculation of repurchase price: For calculating the repurchase price, the exit load, if any, applicable at the time of investment shall be deducted from the applicable NAV of the Scheme.

For example: If the applicable NAV of the Scheme is Rs. 11 and the Exit Load applicable at the time of investment is 1% if redeemed before completion of 1 year from the date of allotment of units and the investor redeems units before completion of 1 year, then repurchase price will be calculated as follows:

Step 1: Applicable NAV * Exit Load at the time of investment in % = Exit Load Amount;
i.e. Rs. 11 * 1% = Rs. 0.11;

Step 2: Applicable NAV - Exit Load Amount = Repurchase price; i.e. Rs. 11- Rs. 0.11 = Rs.10.89.

Methodology of calculation of sale price: The sale price shall be applicable NAV, subject to statutory levies applicable, if any.

For example: An investor invests Rs. 20,000/- and the current NAV is Rs. 20/- (assuming there is no statutory levy) then the sale/subscription price will be Rs. 20/- and the investor will receive 20000/20 = 1000 units.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

- The purpose of the above illustration is to purely explain the impact of expense ratio charged to the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications.

The AMC will disclose the Total Expense Ratio (TER) of the Scheme on daily basis on the website of the Mutual Fund (www.canararobeco.com) and on the website of AMFI (www.amfiindia.com).

Further, any change in the base TER (i.e. TER excluding additional expenses provided in Regulation 52 (6A)(c) of SEBI (Mutual Funds) Regulations, 1996) and Goods & Services Tax on investment and advisory fees in comparison to previous base TER charged to the Scheme/Plan shall be communicated to investors of the

Scheme/Plan through notice via email or SMS and will be uploaded on the website (www.canararobeco.com) at least three working days prior to effecting such change.

Provided that any increase or decrease in TER in a mutual fund scheme due to change in AUM and any decrease in TER in a mutual fund scheme due to various other regulatory requirements would not require issuance of any prior notice to the investors.

The total expense ratio of the scheme is subject to change, based on the Regulations/Circulars issued by SEBI from time to time.

Investor Education and Awareness initiatives:

As per Paragraph 10.1.16 of SEBI Master Circular for Mutual Funds dated June 27, 2024, the AMC shall annually set apart at least 2 basis points p.a. (i.e. 0.02% p.a.) on daily net assets of the Scheme within the limits of total expenses prescribed under Regulation 52 of SEBI (MF) Regulations for investor education and awareness initiatives undertaken by the Fund. The total expenses of the Scheme including the Investment Management and Advisory Fee shall not exceed the limits stated in Regulation 52 of the SEBI (MF) Regulations. Any expenditure in excess of the SEBI regulatory limits shall be borne by the AMC or by the Trustees or the Sponsor.

D. LOAD STRUCTURE

Exit Load is an amount which is paid by the investor to redeem the units from the scheme. Load amounts are variable and are subject to change from time to time. For the current applicable structure, please refer to the website of the AMC (<https://www.canararobeco.com/wp-content/uploads/2025/05/Scheme-Load-structure.pdf>) or may call at (1800 209 2726) or your distributor.

Type of Load	Load chargeable (as %age of NAV)
Exit Load	1% - if redeemed/switched out above 12% of allotted units within 365 days from the date of allotment.
	Nil - if redeemed/switched out upto 12% of allotted units within 365 days from the date of allotment.
	Nil - if redeemed/switched out after 365 days from the date of allotment.

S.O.16 No exit load shall be charged on bonus units and reinvestment of Income Distribution cum Capital Withdrawal (IDCW).

The above mentioned load structure shall be equally applicable to the special products such as SIP, switches, STP, SWP, etc. offered by the AMC. Further, for switches between the Growth and Income Distribution cum Capital Withdrawal Option or vice versa, no load will be charged by the Scheme. For switches between the Plans i.e. between Regular and Direct Plan or vice versa, no load will be charged by the Scheme. Exit load charged to the investors will be credited back to the scheme net of GST. The Investor is requested to check the prevailing Load structure of the Scheme before investing.

The distributors shall disclose all the commissions (in the form of trail commission or any other mode) payable to them for the different competing schemes of various mutual funds from amongst which the scheme is being recommended to the investor. For any change in load structure, AMC will issue an addendum and display it on the website/- Investor Service Centres.

S.O.16 Any imposition or enhancement of Load in future shall be applicable on prospective investments only. At the time of changing the Load Structure following measures would be taken to avoid complaints from investors about investment in the schemes without knowing the loads:

- S.O.16(iv) i. A public notice would be given in respect of such changes.
- S.O.16(i) ii. The addendum detailing the changes would be attached to Scheme Information Document and Key Information Document. The addendum will be circulated to all the distributors / brokers so that the same can be attached to all Scheme Information Documents and Key Information Documents already in stock.
- S.O.16(ii) iii. Arrangements will be made to display the addendum in the Scheme Information Document in the form of a notice in all the Investor Service Centers and distributors / brokers' office.
- S.O.16(iii) iv. The introduction of the exit load along with the details may be stamped in the acknowledgement slip issued to the investors on submission of the application form and may also be disclosed in the statement of accounts issued after the introduction of such load.
- S.O.16(v) v. Any other measure which the AMC/Mutual Fund may feel necessary.

The investor is requested to check the prevailing load structure of the scheme before investing.

S.O. 17(b) The repurchase price of an open ended scheme shall not be lower than 97% of the NAV. < C.S.O. 47>

The AMC / Trustee reserves the right to change / modify the Load structure, subject to the limits prescribed under the Regulations, if it so deems fit in the interest of investors and for the smooth and efficient functioning of the Mutual Fund.

E. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if either/both of such limit(s) is breached during the NFO of the Scheme, it shall be ensured that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the Applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

I. Introduction

A. Definitions/interpretation

In this Scheme Information Document, the words and expressions shall have the meaning specified in the following link, unless the context otherwise requires.

B. Risk Factors

Scheme Specific Risk Factors: < C.S.O. 8>

S.O.2

As the Scheme intends to invest in equity/equity related instruments of the entities belonging to the banking and financial services sector and hence the concentration is likely to be high in entities belonging to the said sector. Further, the volatility and/or adverse performance of the said sector and/or of the entities belonging to this sector would have a material adverse bearing on the performance of the Scheme.

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

I. Risks associated with investment in Equity and Equity related instruments:

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted Securities may be affected if they have to be sold prior to the target date for divestment. All investments involve risks and there can be no guarantee against loss resulting from an investment in any share of the Scheme, nor is there any assurance that the Scheme's investment objective will be attained in respect of its overall performance. In certain circumstances the right of the investors of the Scheme may be suspended. Consequently, the NAVs of units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

The Fund Manager of the Scheme may invest in the Securities of smaller, lesser-known entities. These investments may involve greater risk and the possibility of greater portfolio price volatility than investing in larger, more mature or better-known firms. Amongst other reasons for the greater price volatility of Securities of small entities and unseasoned entities are the less certain growth prospects of smaller firms, the lower degree of liquidity of the markets for such securities, and the greater sensitivity of small entities to changing economic conditions. For example, these entities are associated with higher investment risk than that normally associated with larger firms due to the greater business risks of small size and limited

product lines, markets, distribution channels and financial and managerial resources. Such Securities, including those of newer or recently restructured entities or those which may have experienced financial difficulties, may be more volatile in price than larger capitalized securities. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options.

The value of the Scheme investments may be affected by factors affecting capital markets generally, such as price and volume volatility in the markets, interest rates, currency exchange rates, foreign investments, changes in government policy, political, economic or other developments and closure of the stock exchanges.

Trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity related securities. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The length of the settlement may affect the Scheme in the event the Scheme has to meet large number of redemption.

II. Risks associated with investments in Fixed Income Securities/ Bonds:

Price-Risk or Interest - Rate Risk: Fixed income securities such as government bonds, corporate bonds and money market instruments and derivatives run price - risk or interest - rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re - investment Risk: Investments in fixed income securities may carry re - investment risk as interest rates prevailing on the coupon payment or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market. The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Credit Risk: This is the risk associated with the issuer of a debenture / bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to

that extent Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their maturity date. The unlisted security can go down in value before the maturity date and selling of these securities before the maturity date can lead to losses in the portfolio.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern e.g., corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated.

III. Risks Associated with investing in Money Market Instruments:

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's inability to meet interest and principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the issuer of such instruments.
- The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

S.O.5 IV. Risk associated with investing in Derivatives: < C.S.O. 28>

As and when the Scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

S.O.5

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies.

The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original

investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

Basis Risk associated with imperfect hedging using Interest Rate Futures (IRF): The imperfect correlation between the prices of securities in the portfolio and the IRF contract used to hedge part of the portfolio leads to basis risk. Thus, the loss on the portfolio may not exactly match the gain from the hedge position entered using the IRF.

Trading in derivatives has the following risks:

- a) An exposure to derivatives in excess of the hedging requirements can lead to losses.
- b) An exposure to derivatives can also limit the profits from a genuine investment transaction.
- c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.
- d) The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

V. Risk associated with Securities Lending:

S.O.6

Securities lending may involve the risk of default on the part of the borrower. However, this is unlikely to happen if the stock lending is carried out for stocks which are in dematerialized form and through an authorized stock lending scheme, subject to appropriate Regulations. The Investment Manager perceives such situations to be exceptional in nature. Although the Stock Market in India is still developing, considering the good demand for listed / quoted Equity Shares of reputed companies, the Scheme(s) may choose to meet repurchase needs through temporary borrowings, within the permissible limits.

VI. Risk associated with investing in Securitized Debt:

The Scheme may invest in domestic securitized debt such as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). ABS are securitized debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. MBS are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties.

At present in Indian market, following types of loans are securitized:

- a) Auto Loans (cars / commercial vehicles / two wheelers)
- b) Residential Mortgages or Housing Loans
- c) Consumer Durable Loans
- d) Personal Loans
- e) Corporate Loans

In terms of specific risks attached to securitization, each asset class would have different underlying risks. Residential Mortgages generally have lower default rates than other asset classes, but repossession becomes difficult. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Asset classes like personal loans, credit card receivables are unsecured and in an economic downturn may witness higher default. A corporate loan / receivable, depend upon the nature of the underlying security for the loan or the nature of the receivable and the risks correspondingly fluctuate.

The rating agencies define margins, over collateralization and guarantees to bring risk in line with similar AAA rated securities. The factors typically analyzed are as follows:

- a) **Assets securitized and Size of the loan:** This indicates the kind of assets financed with the loan and the average ticket size of the loan. A very low ticket size might mean more costs in originating and servicing of the assets.
- b) **Diversification:** Diversification across geographical boundaries and ticket sizes might result in lower delinquency.
- c) **Loan to Value Ratio:** Indicates how much % value of the asset is financed by borrower's own equity. The lower this value the better it is. This suggests that where the borrowers own contribution of the asset cost is high; the chances of default are lower.
- d) **Average seasoning of the pool:** This indicates whether borrowers have already displayed repayment discipline. The higher the number, the more superior it is.

The other main risks pertaining to Securitised debt are as follows:

- a) **Prepayment Risk:** This arises when the borrower pays off the loan sooner than expected. When interest rates decline, borrowers tend to pay off high interest loans with money borrowed at a lower interest rate, which shortens the average maturity of ABSs. However, there is some prepayment risk even if interest rates rise, such as when an owner pays off a mortgage when the house is sold or an auto loan is paid off when the car is sold.

Reinvestment Risk: Since prepayment risk increases when interest rates decline, this also introduces reinvestment risk, which is the risk that the principal can only be reinvested at a lower rate.

VII. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

All the market repo and Tri-party repo are settled through Clearing Corporation of India Limited (CCIL). CCIL acts as a Central Counterparty (CCP) to all trades received for settlement.

Risk of exposure in the TREPS, Repos & Reverse Repos in Government Securities/Treasury Bills emanates mainly on two counts –

- a. Risk of failure by a lender to make funds available or by a borrower to provide adequate collateral security to accept the fund at the first leg of borrowing and lending under Tri-party Repo transaction or Repo transactions in Government Securities / treasury Bills.
- b. Risk of default by a borrower in repayment.

VIII. Risk factors associated with Creation of Segregated Portfolio:

Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

IX. Risk associated with Floating Rate Securities:

The Scheme may invest in floating rate instruments. These instruments' coupon will be reset periodically in line with the benchmark index movement. The changes in the prevailing rates of interest will affect the value of the Scheme's holdings and thus the value of the Scheme's Units. The Scheme could be exposed to the interest rate risk

- (i) to the extent of time gap in resetting of the benchmark rates, and
- (ii) to the extent the benchmark index fails to capture the interest rate movement.

Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. mark-up) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments. If the floating rate asset is created by swapping the fixed return to a floating rate return, then there may be an additional risk of counter-party who will pay floating rate return and receive fixed rate return. Due to the evolving nature of the floating rate market, there may be an increased degree of liquidity risk in the portfolio from time to time.

X. Risk factors associated with repo transactions in corporate bonds:

In Repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. The Investment Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles or with entities regulated by SEBI/RBI/IRDA.

Collateral Risk: In the event of default by the repo counterparty, the schemes have recourse to the corporate debt securities. Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations.

XI. Risk factors associated with investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities:

Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan

receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

Credit Risk: The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

XII. Risks Factors associated with transaction in Units through stock exchange(s):

In respect of transaction in Units of the Scheme by an investor through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the scheme has no control.

XIII. Risk factors associated with investment in Foreign Securities: < C.S.O. 11>

S.O.3

The Scheme may invest in overseas / foreign securities with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. The scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers.

Overseas investments are subject to a maximum of US \$ 1 billion per Mutual Fund, within the overall industry limit of US \$ 7 billion or such limits as may be prescribed by SEBI/RBI from time to time. Therefore, the limit of USD 1 billion may or may not be able for utilization due to the USD 7 billion limit being exhausted by other Mutual Funds. Further, investments in overseas Exchange Traded Fund (ETF(s)) are subject to a maximum of US \$ 300 million per Mutual Fund, within the overall industry limit of US \$ 1 billion.

As and when the investment limits at Mutual Fund level/Industry level are exhausted or nearing exhaustion, the scheme may temporarily suspend deployment of funds in overseas funds/securities.

Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.

Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of such Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management and hedging and portfolio rebalancing and in accordance with conditions as may be stipulated under the Regulations and by RBI from time to time.

Investment in Foreign Securities involves a currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative.

XIV. Risk Factors Associated with Investments in REITs and InvITs:

Market Risk: REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.

Liquidity Risk: As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.

Reinvestment Risk: Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

Regulatory/Legal Risk: REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law.

XV. Risk associated with investing in mutual fund units

Investment in units of Mutual Fund scheme involves investment risks including the possible loss of principal. As the price / value / interest rates of the underlying securities in which the mutual fund scheme invests fluctuates, the value of units of mutual fund scheme may go up or down. The value of underlying securities may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods etc. The NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by liquidity in the securities market. Investment in units of mutual fund scheme is also exposed to risk of suspension of subscriptions / redemptions of the units, change in fundamental attributes etc. Since the Scheme may invest in schemes of Mutual Funds, scheme specific risk factors of each such mutual fund schemes will be applicable to the Scheme portfolio.

XVI. Other Risks:

a) Stock Market Fluctuations:

Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual entities and general market conditions. The securities exchange on which the shares may be listed may have the right to suspend or limit trading in all securities which it

lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.

b) Income Distribution cum Capital Withdrawal (Dividends):

The Scheme may distribute not only investment income, but also realised capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of units of the Scheme, and a reduction in the potential for long-term capital growth.

c) Warrants:

The Scheme may invest in warrants; the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme, any redemption by these entities may have an impact on the performance of the Scheme.

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme or for any amendments in the tax laws that may affect the tax benefits available under the Scheme. The tax benefits are based on the present laws and rules in force.

C. Risk Mitigation strategies: < C.S.O. 9>

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in portfolio construction process.

Equity and Equity-related Instruments: Risks related to these instruments will be minimized by investing only in those entities that have been thoroughly analyzed by the AMC.

The Scheme shall invest in a portfolio predominantly of equity and equity related instruments of entities engaged in the banking and financial services. However, to achieve diversification the Scheme may also invest up to 20% of the assets in entities engaged in businesses other than banking and financial services. This will help mitigate the risk associated with investments in banking and financial services entities. Entities in the banking and financial services have a presence across all market cap segments i.e. large, midcap and small cap. The portfolio is intended to comprise entities across market cap segments. This shall help in managing volatility and ensuring adequate liquidity at all times.

The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified.

The Scheme may use derivatives instruments like Stock/ Index Futures or Options, Interest Rate Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging or portfolio balancing or any other purpose as allowed under the regulations, within the permissible limit of the portfolio, which may be increased as permitted under the Regulations and guidelines from time to time.

Liquidity, ex-ante tracking error, VaR and Limits on sectoral and entity exposures will be monitored on an ongoing basis to ensure that they are all within the defined regulatory/internal limits. Monthly scenario analysis will be done on the portfolio and results shall be shared with the investment team for them to take suitable action, if deemed necessary. In addition, the scheme's performance vis-a-vis the benchmark will also be reviewed by the investment committee.

As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations.

REITs: The valuation of the REIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs may have volatile cash flows. Liquidity Risk refers to the ease with which REIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be times when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists. Regular monitoring of the REITs liquidity/ trading volume & changes in market conditions/ regulatory changes will help mitigate the same. Generally, there would be an inverse relationship between the interest rates and the price of units. Regular monitoring and evaluation of the portfolio structure with respect to changing interest rate scenario will be undertaken.

Debt and Money Market Instruments: Concentration of risk is mitigated by defining issuer limits. Rigorous in-depth credit evaluation of the issuers will be conducted by the investment team before making investments. As part of credit evaluation, a study on the operating environment, past track record as well as future prospects of the issuer, short as well as long term financial health of the issuer will be carried out. The AMC will be guided by the ratings of accredited agencies such as CRISIL, CARE, ICRA etc. as well as the internal norms for credit exposure. Investments made by the scheme would be in accordance with the investment objectives of the scheme and provisions of SEBI Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, the investment team of the AMC will carry out rigorous in-depth analysis of the securities proposed to be invested in. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

The Scheme being open ended, some portion of the portfolio may be invested in Money Market Instruments so as to meet the normal repurchase requirements. The remaining investment will be made in securities which are either expected to be reasonably liquid or of varying maturity. However, the NAV of the Scheme may be affected, if the securities invested in are rendered illiquid after investment.

In addition, the Investment Manager will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The Investment Manager would use this analysis to assess the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

InvITs: The valuation of the InvIT units may fluctuate based on economic conditions, fluctuations in markets in which the InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. InvITs may have volatile cash flows. To mitigate this, the maximum exposure to units of InvITs is capped at 10% of the portfolio. Liquidity Risk refers to the ease with which InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be times when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists. Regular monitoring of the InvITs liquidity/ trading volume & changes in market conditions/ regulatory changes will help mitigate the same. Generally, there would be an inverse relationship between the interest rates and the price of units. Regular monitoring and evaluation of the portfolio structure with respect to changing interest rate scenario will be undertaken.

The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL).

v. Position limit for each scheme of a Mutual Fund for stock based derivative contracts

The scheme-wise position limit / disclosure requirements shall be –

- i. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of: 1% of the free float market capitalisation (in terms of number of shares) or 5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.
24. To reduce interest rate risk in a debt portfolio, mutual funds may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$

In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, up to maximum of 20% of the net assets of the scheme, subject to the following:

- i. Exposure to IRFs is created only for hedging the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- ii. Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (excluding the hedged portions, if any) and the IRF is at least 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of Paragraph 12.24.1 of SEBI Master Circular for Mutual Funds. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging up to 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:
