Please refer to Section II in page no. 40 to 44 for more details on the above instruments.

C. WHAT ARE THE INVESTMENT STRATEGIES? (Standard Observation 7)(Consolidated Std. Obs. 26, 27 & 28)

The Scheme is a passively managed index fund, which endeavors to invest in stocks in proportion to the weightage of the stocks in the Nifty MidSmallcap400 50:50 Index. The investment strategy would revolve around reducing the tracking error to the least possible extent through regular rebalancing of the portfolio, taking into account the change in weights of stocks in the Index as well as the incremental collections/redemptions in the Scheme. Such rebalancing shall be done in accordance with timelines prescribed by SEBI from time to time.

A part of the funds may be invested in debt and money market instruments, to meet the liquidity requirements.

The Scheme may also invest in the schemes of Mutual Funds in terms of the prevailing SEBI (MF) Regulations.

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/Sponsors/Trustee does not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

EQUITY INVESTMENT STRATEGY:

The investment objective of the scheme is to achieve a return equivalent to Nifty MidSmallcap400 50:50 Index by investing in stocks of companies comprising Nifty MidSmallcap400 50:50 Index. The Scheme endeavours to invest in stocks in proportion to the weightages of these stocks in the Nifty MidSmallcap400 50:50 Index.

The fund will, in general, invest a significant part of its corpus in equities; the surplus amount of the fund, not exceeding 5% shall be invested in Cash/Tri-Party Repo, Repo in corporate debt securities & Money Market instruments.

The performance of the Scheme may not be commensurate with the performance of the respective benchmark of the Schemes on any given day or over any given period. Such variations are commonly referred to as the tracking error. The Scheme intends to maintain a low tracking error by effectively replicating the portfolio in line with the index.

However, there is no assurance that all such buying and selling activities would necessarily result in benefit for the Fund.

DEBT AND MONEY MARKET INVESTMENT STRATEGY: (Consolidated Std. Obs. 13)

A small portion of the net assets will be held as cash or will be invested in debt and money market instruments permitted by SEBI/RBI including TREPS or in alternative investment for the TREPS as may be provided by the RBI, to meet the liquidity requirements under the Scheme.

STRATEGIES FOR INVESTMENT IN DERIVATIVES:

The Scheme may take derivatives positions based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme.

The Scheme intends to use derivatives mainly for the purpose of hedging and portfolio balancing. Losses may arise as a result of using derivatives, but these are likely to be compensated by the gains on the underlying cash instruments held by the Scheme. The Scheme will not assume any leveraged exposure to derivatives.

Derivatives can be traded over the exchange or can be structured between two counterparties.

PORTFOLIO TURNOVER:

Portfolio Turnover is a term used to measure the volume of trading that occurs in a Scheme's portfolio during a given time period. The scheme being an open-ended Debt Index Fund, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition of the underlying index, if any. The Scheme has no specific target relating to portfolio turnover. The effect of higher portfolio turnover could be higher brokerage and transaction costs (if any).

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE? (Standard Observation 9)

The Benchmark for the Scheme is Nifty MidSmallcap400 50:50 Index TRI (Total Returns Index).

The above Index has been chosen as the benchmark since the Scheme will invest in stocks which are constituents of Nifty MidSmallcap400 50:50 Index. Thus, the aforesaid benchmark is such that it is most suited for comparing the performance of the Scheme.

Please refer to the Section on Index Methodology at Page No. 48 to 65 for more details.

III. OTHER DETAILS

A. COMPUTATION OF NAV (*Consolidated Std. Obs. 42*)

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding under the Scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

In case of any conflict between the Principles of Fair Valuation and valuation guidelines specified by SEBI, the Principles of Fair Valuation shall prevail.

NAV of Units of under the Scheme shall be calculated as shown below:

NAV (₹) per Unit =

Market or Fair Value of the Scheme's Investments + Current Assets - Current Liabilities and Provisions
No. of Units outstanding under each Scheme

The NAV of the Scheme will be calculated and disclosed at the close of every Business Day.

The NAV of the Scheme will be calculated up to 4 decimal places.

Methodology for calculation of sale and repurchase price.

Pursuant to SEBI circular no. *SEBI/HO/IMD/DF2/CIR/P/2018/92* dated June 05, 2018 on "Go Green Initiative in Mutual Funds", the methodology of calculating the sale and repurchase price of units is explained with an illustration below:

A) Sale Price:

The Sale Price for a valid purchase will be the Applicable NAV of the respective Scheme i.e. Sale Price = Applicable NAV.

For a valid purchase request of ₹ 10,000, where the applicable NAV is ₹ 10, the units will be allotted as below:

Purchase Amount - ₹ 10,000 Applicable NAV - ₹ 10 No. of Units - 1,000 Units (<i>Purchase Amount/Applicable NAV</i>)

Please note that the entry load has been abolished with effect from August 01, 2009 vide SEBI Circular no.SEBI/IMD/CIR No. 4/ 168230/09 dated August 01, 2009. Hence, Sale price is equal to the applicable NAV.

B) Repurchase Price:

The Repurchase Price for a valid repurchase will be the applicable NAV reduced by any exit load (say 1%, if redeemed before completion of 1 year). i.e. applicable NAV - (applicable NAV X applicable exit load)

For a valid repurchase request where the applicable NAV is ₹ 10, the repurchase price will be as follows :

Applicable NAV - ₹ 10
Exit Load - 1%
$= 10 - (10 \times 1\%)$
$= 10 - (0.1)$
= ₹ 9.9

Therefore, for the repurchase for 1,000 units, the Investor will receive the proceeds as given below:

No. Of Units - 1,000
Repurchase Price = ₹9.9
$= 1000 \times 9.9$
= ₹ 9,900

Note: Transaction charges and other charges/expenses, if any, borne by the investors have not been considered in the above illustration(s).

The Mutual Fund will ensure that the Redemption Price will not be lower than 95% of the Applicable NAV provided that the difference between the Redemption Price and the Subscription /Purchase Price at any point in time shall not exceed the permitted limit as prescribed by SEBI from time to time, which is currently 5% calculated on the Subscription/ Purchase Price. The Purchase Price shall be at applicable NAV. **(Standard Observation 17(b)) (Consolidated Std. Obs. 47)**

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. kindly refer to SAI.

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price/ value/ interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsors and their affiliates / AMC / Mutual Fund does not guarantee future performance of the Scheme of the Mutual Fund.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of ₹1 lakh each made by them towards setting up the Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

Scheme Specific Risk Factors

The Scheme is subject to the specific risks that may adversely affect the Scheme's NAV, return and / or ability to meet its investment objective. The specific risk factors related to the Scheme include, but are not limited to the following:

- Tracking Error/ Tracking Difference Risk: *(Consolidated Std. Obs. 10) (Consolidated Std. Obs. 39)*

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index, regulatory restrictions and lack of liquidity which may result in Tracking Error. Hence it may affect Scheme's ability to achieve close correlation with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its

underlying index. The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible.

Tracking errors are inherent in any index fund and such errors may cause the scheme to generate returns which are not in line with the performance of the Nifty MidSmallcap400 50:50 Index or one or more securities covered by / included in the Nifty MidSmallcap400 50:50 Index and may arise from a variety of factors including but not limited to:

1. Any delay in the purchase or sale of securities due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividend, etc.
2. The index reflects the prices of securities at a point in time, which is the price at close of business day on the stock exchange. The scheme, however, may trade the securities at different points in time during the trading session and therefore the prices at which the scheme trades may not be identical to the closing price of each scrip on that day on the respective stock exchange. In addition, the scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance from the closing price considered in the Index.
3. The potential of trades to fail may result in the scheme not having acquired the security at the price necessary to mirror the index.
4. Transaction and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
5. Being an open-ended passive scheme, the scheme may hold appropriate levels of cash or cash equivalents to meet ongoing redemptions.
6. The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to circuit filters in the securities, liquidity and volatility in security prices. The tracking error of the scheme based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs/ Mutual Fund, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any. The Scheme will disclose the tracking error based on past one year rolling data, on a daily basis, on the website of AMC and AMFI. In case the Scheme has been in existence for a period of less than one year, the annualized standard deviation shall be calculated based on available data.

Risks associated with Equity and Equity Related Instruments:

Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as price volatility, volumes traded, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected.

Equity and Equity related instruments listed on the stock exchange carry lower liquidity risk; however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen

circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, if there is a subsequent decline in the value of securities held in the Scheme's portfolio.

Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

Risks associated with Debt and Money Market Instruments or Fixed Income Securities

Debt and Money Market Instruments or Fixed Income Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Liquidity Risk: The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the scheme might have to incur a significant "impact cost" while transacting large volumes in a particular security.

Reinvestment Risk: Investments in fixed income securities carry reinvestment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements. This may result in loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. During the tenure of the security this spread may move adversely or favourably leading to fluctuations in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Risk of Rating Migration: It may be noted that the price of a rated security would be impacted with the change in rating and hence, there is risk associated with such migration.

Counterparty and Settlement Risk: Corporate Bond Repo will be settled between two counterparties in the OTC segment unlike in the case of TREPS transactions where CCIL stands as central counterparty on all transactions (no settlement risk). Settlement risk in reverse repo will be mitigated by requiring the counterparty (entity borrowing funds from the Mutual Fund) to deliver the defined collateral in the account of the MF before the cash is lent to the counterparty. Further, the Mutual Fund will also have a limited universe of counterparties, but not limited to, comprising Scheduled Commercial Banks, Primary Dealers, Mutual Funds and National Financial Institutions.

Legislative Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.

Risk factors associated with processing of transactions through Stock Exchange Mechanism

The trading mechanism introduced by the Stock Exchange(s) is configured to accept and process transactions for mutual fund Units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other authorised Stock Exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing /settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the Stock Exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized Stock Exchange(s). Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of units. The Fund and the AMC are not responsible for the negative impacts.

Risk associated with Securities Lending (Standard Observation 6)

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

The AMC shall adhere to the following limits should it engage in Stock Lending:

1. Not more than 20% of the net assets of a Scheme can generally be deployed in Stock Lending.
2. Not more than 5% of the net assets of a Scheme can generally be deployed in Stock Lending to any single approved intermediary / counterparty.

Risk associated with Derivatives (Standard Observation 5)

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be

profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Trading in derivatives has the following risks:

1. An exposure to derivatives in excess of the hedging requirements can lead to losses.
2. An exposure to derivatives, when used for hedging purpose, can also limit the profits from a genuine investment transaction.
3. Derivatives carry the risk of adverse changes in the market price.
4. Illiquidity Risk i.e., risk that a derivative trade may not be executed or reversed quickly enough at a fair price, due to lack of liquidity in the market.

The Fund may use derivatives instruments like equity futures & options, or other derivative instruments as permitted under the Regulations and Guidelines. Usage of derivatives will expose the Scheme to liquidity risk, open position risk, and opportunities risk etc. Such risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. In case of the derivative strategies, it may not be possible to square off the cash position against the corresponding derivative position at the exact closing price available in the Value Weighted Average Period. Debt derivatives instruments like interest rate swaps, forward rate agreements or other derivative instruments also involve certain risks.

C. Risk Mitigation Strategies (*Consolidated Std. Obs. 9*)

The Scheme aims to track the Nifty Midsmallcap400 50:50 Index TRI before expenses. The Index is tracked on a regular basis and changes to the constituents or their weights, if any, are replicated in the Underlying Portfolio with the purpose of minimising tracking errors. Investments in equity, debt and money market securities carry various risks such as but not limited to the ones mentioned above. Whilst such risks cannot be eliminated, they may be mitigated by diversification. In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in the securities market.

The AMC incorporates necessary framework in place for risk mitigation at an enterprise level, and scheme level in accordance with the Risk Management Framework prescribed by the SEBI. The Risk Management division of the AMC is an independent division within the organisation. Internal risk thresholds are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. The Risk Management Committee of the Board enables a dedicated focus on risk factors and the relevant risk mitigants from time to time.

Equity Investments

Liquidity risk: The liquidity of the Scheme's investments is inherently restricted by the trading volumes in the securities in which the scheme invests as per the Underlying Index.	As such the liquidity of securities that the scheme invests into could be relatively low. The Scheme will try to maintain a proper asset-liability match to ensure redemption payments are made on time.
Volatility risk: The equity markets and derivative markets are volatile and the value of securities, derivative contracts and other instruments correlated with the equity markets may fluctuate dramatically from day to day. This volatility may cause the value of investment in the Scheme to decrease.	Over 95% of the scheme will invest in securities in line with the Nifty Midsmallcap400 50:50 Index and will thus have a similar volatility profile as the index. The volatility of the debt & money market portion of the portfolio will be controlled by diversification.
Derivative risk: As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bond.	The investment managers will invest only in exchange traded derivatives and the investment shall be in line with guidelines and regulatory limits as specified by regulators & scheme documents. No investment will be made in OTC derivative contracts for equity derivatives.
Concentration risk: The risk of the scheme investing heavily in a particular sector, asset class, or a small number of companies. If that specific	Over 95% of the scheme will invest in securities in line with the Nifty Midsmallcap400 50:50 Index and will thus have a similar concentration profile as the index. area underperforms, the fund's value can suffer disproportionately.	
Tracking Error: The performance of the Scheme may not be commensurate with the performance of the benchmark index on any given day or over any given period, referred to as tracking error.	The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimise tracking error to the maximum extent possible. The investment manager will endeavour to maintain low cash levels to minimise tracking error.
Securities Lending: Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.	All securities lending and borrowing transactions are carried out through the SLB platform of the recognized stock exchanges. The Scheme adheres to the limits prescribed by SEBI for securities lending.
Processing of transactions through Stock Exchange Mechanism: transactions conducted through the Stock Exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized Stock Exchange(s). Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of units.	The AMC has established appropriate internal controls, monitoring mechanisms, and reconciliation processes to manage risks associated with transactions processed through the Stock Exchange mechanism.

Debt Investments

Risk & Description	Risk mitigants / management strategy
Market Risk/Interest Rate Risk: As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-Term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	In a rising interest rate scenario, the Scheme may increase its investment in money market securities whereas if the interest rates are expected to fall, the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.
Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.	Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the Scheme will ensure that these instruments are sufficiently backed by assets.

Liquidity risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM)	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds
Reinvestment risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risk will only apply to the small portion of the portfolio made up of coupon payments from debt instruments, thus limiting its overall impact.
Debt and Money Market instruments: Debt and Money Market Instruments or Fixed Income Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.	• Basis Risk: Securities invested in are fixed rate securities and hence basis risk does not apply. This risk is generally associated with floating rate securities and has a higher bearing on long-term securities. • Spread Risk: Securities invested in are fixed rate securities and hence spread risk does not apply. This risk is generally associated with floating rate securities and has a higher bearing on long-term securities. • Risk of Rating Migration: TREPS and Sovereign securities do not have rating and other eligible money market instruments and overnight funds the scheme have time to maturity lower than 91 days which results in a very low probability of rating migration. This risk is generally associated with long-term securities. • Counterparty and Settlement Risk: Settlement risk in reverse repo will be mitigated by requiring the counterparty (entity borrowing funds from the Mutual Fund) to deliver the defined collateral in the account of the MF before the cash is lent to the counterparty. • Legislative Risk: The Fund Manager maintains the flexibility to rebalance the portfolio in response to policy shifts (e.g., changes in sector-specific subsidies or import/export duties) to protect the scheme's capital and optimize returns.
