THE JOINT VETERINARY COMMITTEE,

Having regard to the Agreement between the European Community and the Swiss Confederation on trade in agricultural products ⁽¹⁾ and in particular Article 19(3) of Annex 11 thereto,

Whereas:

- (1) The Agreement between the European Community and the Swiss Confederation on trade in agricultural products (hereinafter referred to as 'the Agriculture Agreement') entered into force on 1 June 2002.
- (2) Under Article 19(1) of Annex 11 to the Agriculture Agreement, the Joint Veterinary Committee set up by the Agriculture Agreement (hereinafter referred to as 'the Joint Veterinary Committee') is responsible for considering any matter arising in connection with the said Annex and its implementation, and for carrying out the tasks provided for therein. Article 19(3) of that Annex authorises the Joint Veterinary Committee to amend the Appendices thereto, in particular with a view to their adaptation and updating.
- (3) Decision No 2/2003 of the Joint Veterinary Committee ⁽²⁾ amended Appendices 1, 2, 3, 4, 5, 6 and 11 to Annex 11 to the Agriculture Agreement for the first time.
- (4) Decision No 1/2013 of the Joint Veterinary Committee ⁽³⁾ last amended Appendices 1, 2, 3, 5, 6 and 10 of Annex 11 to the Agriculture Agreement.
- (5) A number of European Union and Swiss legislative provisions have been amended since the last amendment to the Appendices 1, 2, 3, 5, 6 and 10 of Annex 11 to the Agricultural Agreement by Decision No 1/2013 of the Joint Veterinary Committee. Given the scale of the amendments, the references to the legislation were updated.

⁽²⁾ Decision No 2/2003 of the Joint Veterinary Committee set up by the Agreement between the European Community and the Swiss Confederation on trade in agricultural products of 25 November 2003 amending Appendices 1, 2, 3, 4, 5, 6 and 11 to Annex 11 to the Agreement (2004/78/EC) (OJ L 23, 28.1.2004, p. 27).

These carcasses and meat and meat products produced from them must be marked with a special health stamp and may not be traded with the Member States of the European Union, in accordance with the provisions of Article 9a of the ordinance of the Federal Department of Home Affairs of 23 November 2005 on food products of animal origin (RS 817.022.108). Commission Regulation (EU) No 216/2014 ⁽⁵⁾ amends the specific rules applicable to the official controls on *Trichinella* in meat and provides for the delayed application of some provisions. In order to facilitate the gradual amendment of current practice in Switzerland, the possibility of a derogation for the *Trichinella* examination should be extended until 31 December 2016.
- (8a) In order to avoid a discontinuation of existing and well-functioning practices and to ensure a legal continuity which would not cause any foreseeable negative consequences it is appropriate to apply this Decision retroactively with effect from 1 January 2015.
- (9) This Decision shall enter into force on the day it is adopted.

Ordinance of 25 May 2011 on the disposal of animal by-products (OESPA; RS 916.441.22);

B. IMPLEMENTING ARRANGEMENTS

1. The EU reference laboratory for transmissible spongiform encephalopathies (TSEs) is the: Animal Health and Veterinary Laboratory Agency AHVLA Corporate Headquarters (Weybridge), Woodham Lane, New Haw, Addlestone, Surrey, KT15 3NB, United Kingdom. Switzerland shall pay the costs for which it is liable for operations carried out by the laboratory in that capacity. The functions and tasks of the laboratory shall be as laid down in Chapter B of Annex X to Regulation (EC) No 999/2001.

2. Pursuant to Article 57 of the Law on epizootic diseases, Switzerland has established an emergency plan for implementing measures to combat TSEs.
3. Under Article 12 of Regulation (EC) No 999/2001, any animal suspected of being infected by a TSE in the Member States of the European Union shall be placed under an official movement restriction until the results of a clinical and epidemiological examination carried out by the competent authority are known, or killed for the purposes of laboratory examination under official control.

In accordance with Articles 179b and 180a of the Ordinance on epizootic diseases, Switzerland has banned the slaughter of animals suspected of being infected by a TSE. Suspect animals must be killed without spilling blood and incinerated, and their brains must be analysed in the Swiss reference laboratory for TSEs.

Under Article 10 of the Ordinance on epizootic diseases, Switzerland has introduced a uniform identification system for bovine animals enabling them to be traced back to the dam and herd of origin and making it possible to establish that they are not the progeny of BSE suspect females or BSE confirmed bovine animals.

Pursuant to Article 179c of the Ordinance on epizootic diseases, Switzerland slaughters animals infected with BSE, at the latest by the end of the production phase, all animals of the bovine species born between one year before and one year after the birth of the contaminated animal and which, over this period of time, were part of the herd, and all the direct descendants of the contaminated cows born in the two years which preceded the diagnosis.

4. Pursuant to Article 180b of the Ordinance on epizootic diseases, Switzerland slaughters animals infected with scrapie, their dams and the direct descendants of contaminated dams, as well as all the other sheep and goats in the herd, with the exception of:

- sheep carrying at least one ARR allele and no VRQ allele, and

- animals less than two months old which are intended solely for slaughter. The head and organs of the abdominal cavity of these animals are disposed of in accordance with the provisions of the Ordinance on the elimination of animal by-products (OESPA). RS 916.441.22).

By way of exception, in the case of breeds which are low in number, the herd does not have to be slaughtered. In this case, the herd is placed under official veterinary surveillance for a period of two years during which a clinical examination of the animals in the herd is carried out twice a year. If during this period animals are presented for slaughter, their heads, including tonsils, are subjected to an analysis by the Swiss reference laboratory for TSEs.

These measures are reviewed according to the findings from animal health monitoring. In particular, the monitoring period is extended if a new case of the disease is detected in the herd.

In the event of a confirmed case of BSE in a sheep or goat, Switzerland undertakes to apply the measures laid down in Annex VII to Regulation (EC) No 999/2001.

5. Under Article 7 of Regulation (EC) No 999/2001, the Member States of the European Union prohibit the feeding of processed animal proteins to farmed animals which are kept, fattened or bred for the production of food. There is a total prohibition on feeding proteins derived from animals to ruminants in the EU Member States.

Under Article 27 of the Ordinance on the elimination of animal by-products (OESPA), Switzerland has introduced a total prohibition on the feeding of animal protein to farmed animals.

6. Under Article 6 of Regulation (EC) No 999/2001 and in accordance with Chapter A of Annex III to that Regulation, the Member States of the European Union are to introduce an annual BSE monitoring programme. This plan includes a rapid BSE test for all cattle more than 24 months old subject to emergency slaughter, animals which have died on the farm or found to be ill during the *ante mortem* inspection and all animals more than 30 months old slaughtered for human consumption.

The rapid BSE tests used by Switzerland are listed in Chapter C of Annex X to Regulation (EC) No 999/2001.

Pursuant to Article 176 of the Ordinance on epizootic diseases, Switzerland carries out an obligatory rapid BSE test on all cattle older than 48 months that have died, been killed for reasons other than slaughter, been taken diseased to the slaughterhouse or have suffered an accident.

7. Under Article 6 of Regulation (EC) No 999/2001 and in accordance with Chapter A of Annex III to that Regulation, the EU Member States are to introduce an annual monitoring programme for scrapie.

Pursuant to the provisions of Article 177 of the Ordinance on epizootic diseases, Switzerland has introduced a TSE monitoring programme for ovine and caprine animals more than 12 months old. Animals which are subject to emergency slaughter, have died on the farm or have been found to be ill during the *ante mortem* inspection and all animals slaughtered for human consumption were examined over the period from June 2004 to July 2005. As all the samples tested negative for BSE, samples for monitoring purposes are taken from clinical suspect animals, animals subject to emergency slaughter and animals which died on the farm.

The recognition of similarities in legislation governing the monitoring of TSEs in ovine and caprine animals will be reconsidered by the Joint Veterinary Committee.

8. The Joint Veterinary Committee is responsible for providing the information required in Article 6 and Chapter B of Annex III and in Annex IV (3.III) to Regulation (EC) No 999/2001.
9. On-the-spot inspections are carried out under the responsibility of the Joint Veterinary Committee in accordance in particular with Article 21 of Regulation (EC) No 999/2001 and Article 57 of the Law on epizootic diseases.

2. Under Article 8 of Regulation (EC) No 999/2001 and in accordance with point 1 of Annex XI to that Regulation, the Member States of the European Union are to remove and destroy specified risk materials (SRMs).

Under Article 179d of the Ordinance on epizootic diseases and Article 4 of the Ordinance on foodstuffs of animal origin, Switzerland has introduced a policy of removing SRMs from the animal and human food chains. The list of SRMs removed from bovine animals comprises in particular the spinal column of animals aged over 30 months, and the tonsils, intestines from the duodenum to the rectum, and mesentery of animals of all ages.

Under Article 180c of the Ordinance on epizootic diseases and Article 4 of the Ordinance on foodstuffs of animal origin, Switzerland has introduced a policy of removing SRMs from the animal and human food chains. The list of SRMs removed from ovine and caprine animals includes in particular the brain in the cranial cavity, the spinal cord with the dura mater and the tonsils of animals aged over 12 months or which have a permanent incisor erupted through the gum, and the spleen and ileum of animals of all ages.
