- **Female Labour Force Participation Rate rises to 33.7% in August 2025 from 33.3% in July 2025 and 32.0% in June 2025**

Introduction

The Periodic Labour Force Survey (PLFS) conducted by NSO, MoSPI, is the primary source of data on activity participation and employment and unemployment conditions of the population. The PLFS survey methodology has been modified from January 2025 to provide monthly and quarterly estimates of labour force indicators for the country.

Monthly results of PLFS are released in the form of Monthly Bulletins. It presents estimates of key labour market indicators, viz. Labour Force Participation Rate (LFPR), Worker Population Ratio (WPR) and Unemployment Rate (UR) at the all-India level following the Current Weekly Status^[1] (CWS) approach.

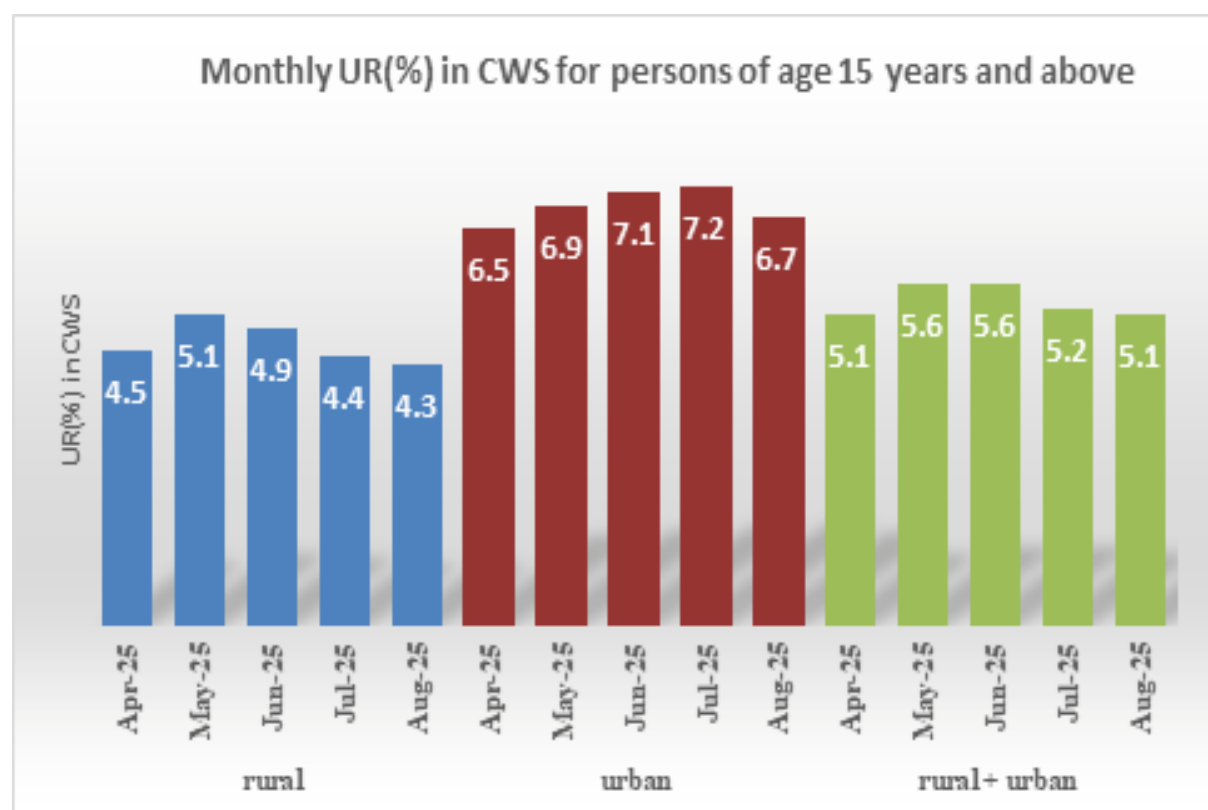

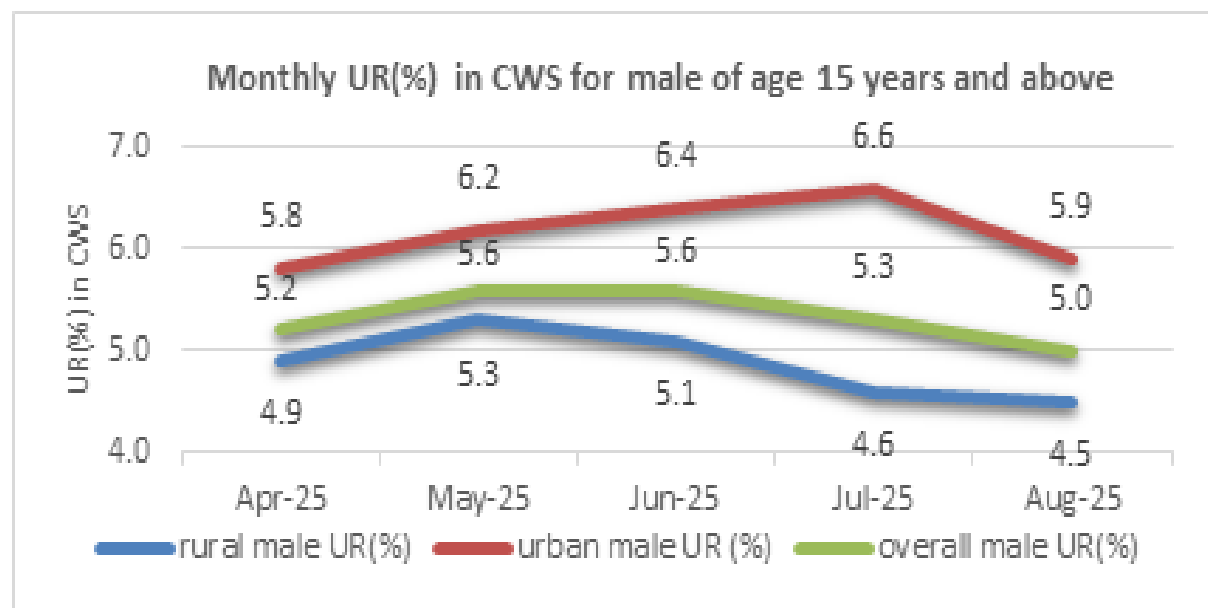

The Monthly Bulletins for the months April 2025 to July 2025 have already been released. The present Monthly Bulletin for the month of August 2025 is the fifth in the series.

Key findings for persons of age 15 years and above following CWS:

• *Unemployment Rate (UR) among male easing to 5-month low level:*

The UR among male of age 15 years and above has declined to 5.0% in August 2025, the lowest level observed since April 2025. This is due to the fall in UR of male in urban areas from 6.6% in July 2025 to 5.9% in August 2025. The UR among rural male has also declined to 4.5% in August 2025 which is lower than the UR levels of previous four months observed for rural male.
