Mumbai, 24 February 2026

The Homi Bhabha Centre for Science Education (HBCSE), a National Centre of the Tata Institute of Fundamental Research (TIFR), will celebrate National Science Day with a wide range of engaging and educational activities for students on February 27, 2026, at its campus in Mumbai.

National Science Day is observed across India every year on February 28 to commemorate the discovery of the Raman Effect by the eminent Indian physicist, C. V. Raman, in 1928.

The celebration at HBCSE-TIFR promises a vibrant and enriching experience for students from primary to higher secondary levels. The programme will feature a diverse array of science exhibits, hands-on experiments, interactive games, puzzles, quizzes, sunspot observation sessions, and exciting rocket demonstrations. The activities are designed to nurture scientific temper, curiosity, and a spirit of inquiry among young learners.

Students, teachers, parents, and members of the public are warmly invited to participate in the event. The initiative aims to foster deeper engagement with science and mathematics while encouraging experiential learning in an interactive environment.

Interested participants are encouraged to register online at tinyurl.com/NSD-2026. Further details, including the institute's address and programme updates, are available on the official website of HBCSE-TIFR (<https://www.hbcse.tifr.res.in/>).

HBCSE is dedicated to promoting excellence in science and mathematics education from the primary school to the undergraduate level, contributing significantly to the development of scientific literacy and talent in the country.
