

Regarding rising food adulteration in India, demand for nationwide anti-adulteration campaign, testing labs and strict penalties

Food adulteration is a major public health concern in India. (The Food Safety and Standards Act, 2013) provides a legal framework for food safety, but its implementation is weak. The government has failed to establish a nationwide anti-adulteration campaign, testing labs, and strict penalties. This has led to a rise in food adulteration, which is a major cause of foodborne diseases. The government should take immediate steps to address this issue.

Firstly, the government should launch a nationwide anti-adulteration campaign. This campaign should aim to educate the public about the dangers of food adulteration and encourage them to report any suspected cases. Secondly, the government should establish testing labs in every district. These labs should be equipped with the necessary equipment and staffed with trained personnel. Thirdly, the government should impose strict penalties on food adulterators. These penalties should be deterrent enough to prevent anyone from engaging in this illegal activity.
