PRESIDENT OF INDIA GRACES THE NATIONAL SCIENTIFIC CONVENTION ON HOMOEOPATHY AT BHUBANESWAR

OUR INSTITUTIONS, RESEARCHERS, TEACHERS AND HEALTHCARE PROFESSIONALS MUST CONTRIBUTE TOWARDS BUILDING AN ACCESSIBLE, EQUITABLE, SCIENTIFICALLY RESPONSIBLE AND RESPONSIVE HEALTHCARE SYSTEM: PRESIDENT DROUPADI MURMU

Posted On: 25 NOV 2026 4:30PM by PIB Delhi

The President of India, Smt Droupadi Murmu graced the National Scientific Convention on Homoeopathy at Bhubaneswar, Odisha today (November 25, 2026).

Speaking on the occasion, the President said that homoeopathy represents an important part of India's diverse healthcare landscape. Over the years, it has developed a wide institutional presence in India and has become accessible to people through educational institutions, healthcare facilities and public health networks.

The President underlined that the future credibility and academic standing of homoeopathy will depend significantly on the scientific integrity of its research and the quality of clinical evidence it generates. She urged research institutions, medical colleges, universities and professional organisations to collaborate in developing a strong research culture. She stated that the National Scientific Convention on Homoeopathy provides an excellent platform for meaningful academic engagement, institutional partnerships and a shared vision for the future. She advised participants, particularly young researchers and professionals, to make full use of this opportunity.

The President said that the development of homoeopathy should be accompanied by an unwavering commitment to scientific inquiry, academic excellence and professional accountability. Research should be guided by sound methodology, adequately designed clinical studies, systematic documentation and transparent reporting. She emphasised on

the need to encourage multicentric studies, systematic reviews, evidence synthesis, pharmacological and fundamental research and the development of reliable clinical databases. She said that intellectual honesty to acknowledge research limitations, report unfavourable findings and allow scientific evidence to guide conclusions is equally important.

The President said that the medical profession demands much more than academic qualifications. It requires intellectual discipline, scientific temper, integrity, empathy and a commitment to lifelong learning. She urged the young practitioners of homoeopathy to cultivate the habit of questioning and never stop learning. She said that they should have the courage to investigate, the patience to seek evidence and the humility to accept new knowledge. They should never forget that behind every patient is a human being with hopes, fears and dignity.

The President said that as India advances towards the national goal of Viksit Bharat 2047, healthcare and education will remain two of its most important pillars. Our institutions, researchers, teachers and healthcare professionals must contribute towards building an accessible, equitable, scientifically responsible and responsive healthcare system. She expressed confidence that this National Convention will encourage scientific dialogue, promote institutional partnerships and inspire a new generation of competent, ethical and socially responsible healthcare professionals.
